Series 388/389 Custom Potentiometer Designer Guide
Now almost any special combination potentiometer you specify can be manufactured and shipped soon after your order is received.

Since Mod Pot potentiometers are modular in construction, we can produce prototype quantities of 1/2 or 5/8 inch square, conductive plastic, cermet, or hot molded carbon pots for you in just a few hours . . . and even production quantities in a matter of days with our VIP (Very Important Potentiometer) service!

Over one billion combinations of single, dual, triple, quad arrangements, push-pull or rotary switches and hundreds of shaft terminal variations can be produced.

If you need a potentiometer and you need it fast, call our product manager or fax us your requirements using the Custom Potentiometer Order Form included in this catalog.

WHY WAIT?
Series 388 Potentiometer
Conductive Plastic - 1/2 inch square; .5 Watt
Series 389 Potentiometer
Cermet - 1/2 inch square; 1 Watt

Description
The 388 and 389 series are 1/2 in. square, modular, stackable potentiometers. The basic construction suits the series for countless design options. The 388 and 389 series can be found in a wide range of sophisticated systems in a broad scope of industries.

Features
- **Small size** - 1/2 in. square
- **Stackable** - up to 8 modules
- **Switches** - rotary, push-pull, push-momentary, and schadow.
- **Versatility** - various shaft, bushings, terminal styles, resistance values, tapers and tolerances. Available in Conductive Plastic or Thick Film Cermet
- **RoHS Compliant**

Special Features
- **Detents** - Center detent and 11 position detents available
- **Seals** - mounting and shaft seals
- **Medium torque** - 1 to 6 oz. in.

**Environmental and Mechanical Specifications continued on next page**
Mechanical Rotation
With or without switch: 295°±5°.

Maximum Shaft Pull Force
.125 in. diameter shaft: 18 lbs (20 lbs Option)
.250 in. diameter shaft: 10 lbs (20 lbs Option)
Concentric Front & Rear Shaft: 7.5 lbs.
AJ rotary and BJ Push-Pull Switches: 10 lbs (20 lbs Option)
BJ Push-Pull or BJM Momentary Switches: 20 lbs.

Shaft Radial Play (single shaft potentiometer)
.028 in. maximum 1 in. from mounting surface with
.250 in diameter bushing

Shaft End Play
.020 in. maximum

Mounting Torque
Torque applied to the mounting nuts should not exceed
15 to 18 inch-pounds (1.7 to 2.0 N-m) for the .375 inch
(9.52 mm) diameter bushing.

Tap Terminal Strength
18 lbs. maximum pull

Hardware
Mounting Hardware available as the following:
A. Hex mounting nut 1/4 in. x 32 thread, 5/16 in. across
   flats, 1/16 in. thick.
B. Internal tooth lockwasher 13/32 in. OD x .025 in. thick.
C. Jam hex nut 5/16 in. across flats, 5/32 in. thick -
   supplied with locking type bushings.

Marking
Consisting of State Electronics part number.
Customer part number optional.

“S” Taper is linear, the change in resistance value being
directly proportional to the degree of rotation. It can be
used either as right-hand or left-hand taper.

“Z” Taper is measured between the wiper and the
counter-clockwise terminals (pin 1 and 2) attains 10%
resistance value at 50% of clockwise rotation (left hand).

“Reverse Z” Taper is measured between the wiper
and the clockwise terminals (pin 2 and 3) attains 10%
resistance value at 50% of counter-clockwise rotation
(right hand).

For conformity and special output curves, consult State
Electronics.

“W” Taper attains 20% resistance value at 50% of
clockwise rotation (left-hand).

“V” Taper attains 20% resistance value at 50% of
clockwise rotation (right-hand).

“T” Taper attains 30% resistance value at 50% of
clockwise rotation (left-hand).

“Reverse T” Taper attains 30% resistance value at 50% of
counter-clockwise rotation (right hand).

“M” Taper is such that a “W” taper is attained from
either the 1 or 3 terminal to the center of the element.

Series 388 & 389 controls are assembled from 1/2” square, stackable potentiometer and switch modules. Combine up to 8 modules, with single or concentric metal shafts. Series 388 potentiometer modules have conductive plastic resistive elements, and Series 389 potentiometer modules have cermet resistive elements.

The most common configurations are listed below. Contact your State Electronics sales representative for your custom requirements.

7. Special Options (Specify if required)

- 8 lb. Stop Torque

8. Bushing (Choose length and diameter)

- Length (Dim "A")
  - Plain .250 in. (6.35mm)
  - Plain .375 in. (9.53mm)
  - Plain .500 in. (12.70mm)
  - Locking .375 in. (9.53mm)

- Diameter
  - Plain .250 in. (6.35mm)
  - Plain .375 in. (9.53mm)

9. Shaft

- Diameter (Choose one)
  - .125 in. (3.18mm) (with .250 in. (6.35mm) Dia. bushing)
  - .250 in. (6.35mm) (with .375 in. (9.53mm) Dia. bushing)

- Length (Dim "B") from mounting surface (FMS) (specify)

- Concentric Shafts (available for up to 3 modules. Module closest to Panel is controlled by outer shaft.)
  - .125 in. (3.18mm) Outer Diameter; .078 in. (1.98mm) Inner Diameter

10. Shaft Ending (Select one)

- Plain
- Slotted
- Special (specify)

11. Locating Lug Options (Select one)

- 1 = one tab - at 9 o'clock (standard)
- 2 = one tab - at 3 o'clock
- 3 = one tab - at 12 o'clock
- 4 = one tab - at 6 o'clock
- 5 = two tabs - at 3 and 9 o'clock
- 6 = two tabs - at 6 and 12 o'clock
- 7 = No Locating Lug

12. Mounting Hardware (Specify)

- Standard
- IP66 Hardware
- None

13. Marking (Specify)

- Standard
- Other

Note: Most parameters (e.g. wattage rating, rotational torque, etc.) are affected by the total number of sections. Download full specifications for further details.
GLOSSARY OF TERMS

Input and Output Terms

Output Voltage
(e) The voltage between the wiper terminal and the designated reference point. Unless otherwise specified, the designated reference point is the CCW terminal (See 3.1).

Output Ratio
(e/E) The ratio of the output voltage to the designated input reference voltage. Unless otherwise specified, the reference voltage is the total applied voltage.

Rotation and Translation

Total Mechanical Travel
The total travel of the shaft between integral stops, under the specified stop load. In potentiometers without stops, the mechanical travel is continuous.

Mechanical Overtravel - Wirewound
The shaft travel between each End Point (or Theoretical End Point for Absolute Conformity or Linearity units) and its adjacent corresponding limit of Total Mechanical Travel.

Mechanical Overtravel
The shaft travel between each Theoretical End Point and its adjacent corresponding limit of Total Mechanical Travel.

Backlash
The maximum difference in shaft position that occurs when the shaft is moved to the same actual Output Ratio point from opposite directions.

Theoretical Electrical Travel
The specified shaft travel over which the theoretical function characteristic extends between defined Output Ratio limits, as determined from the Index Point.

Electrical Overtravel - Nonwirewound
The shaft travel over which there is continuity between the wiper terminal and the resistance element beyond each end of the Theoretical Electrical Travel.

Electrical Continuity Travel
The total travel of the shaft over which electrical continuity is maintained between the wiper and the resistance element.

Tap Location
The position of a tap relative to some reference. This is commonly expressed in terms of an Output Ration and/or a shaft position. When a shaft position is specified, the Tap Location is the center of the Effective Tap Width.

Resistance

End Resistance
The resistance measured between the wiper terminal and an end terminal with the shaft positioned at the corresponding End Point.

Temperature Coefficient Of Resistance
The unit change in resistance per degree celsius change from a reference temperature, expressed in parts per million per degree celsius as follows:

$$ T.C. = \frac{R_2 - R_1}{R_1(T_2 - T_1)} \times 10^6 $$

Where:

- $R_1$ = Resistance at reference temperature in ohms.
- $R_2$ = Resistance at test temperature in ohms
- $T_1$ = Reference temperature in degrees celsius.
- $T_2$ = Test temperature in degrees celsius.

Conformity and Linearity

Linearity
A specific type of conformity where the theoretical function characteristic is a straight line.

Mathematically:

$$ \frac{e}{E} = f(W) \pm C = A(W) + B \pm C $$

Where:

- $A$ is the given slope; $B$ is given intercept at $W=0$.
- $W$ = Angle or slope

Absolute Linearity
The maximum deviation of the actual function characteristic from a fully defined straight reference line. It is expressed as a percentage of the Total Applied Voltage and measured over the Theoretical Electrical Travel. An Index Point on the actual output is required.
The straight reference line may be fully defined by specifying the low and high theoretical end Output Rations separated by the Theoretical Electrical Travel. Unless otherwise specified, these end Output Rations are 0.0 and 1.0 respectively.

Mathematically:

\[ \frac{e}{E} = A\left(\frac{W}{W_T}\right) + B \pm C \]

Where:
A is the given slope; B is given intercept at W=0.
Unless otherwise specified: A = 1; B = 0

**Figure 2**

**Independent Linearity**

The maximum deviation, expressed as a percent of the Total Applied Voltage, of the actual function characteristic from a straight reference line with its slope and position chosen to minimize deviations over the Actual Electrical Travel, or any specified portion thereof.

Note: End Voltage requirements, when specified, will limit the slope and position of the reference line.

Mathematically:

\[ \frac{e}{E} = P\left(\frac{W}{W_A}\right) + Q \pm C \]

Where:
P is unspecified slope; Q is unspecified intercept at W=0. And both are chosen to minimize C but are limited by the End Voltage requirements.

**Figure 3**
Electrical Characteristics

Noise
Any spurious variation in the electrical output not present in the input, defined quantitatively in terms of an equivalent parasitic, transient resistance in ohms, appearing between the contact and the resistance element when the shaft is rotated or translated. The Equivalent Noise Resistance is defined independently of the resolution, the functional characteristics, and the total travel. The magnitude of the Equivalent Noise Resistance is the maximum departure from a specified reference line. The wiper of the potentiometer is required to be excited by a specified current and moved at a specified speed.

Output Smoothness (Non-wirewound Potentiometers Only)
Output Smoothness is a measurement of any spurious variation in the electrical output not present in the input. It is expressed as a percentage of the Total Applied Voltage and measured for specified travel increments over the Theoretical Electrical Travel. Output Smoothness includes effects of contact resistance variations, resolution, and other micrononlinearities in the output.

Resolution
A measure of the sensitivity to which the Output Ratio of the potentiometer may be set.

Dielectric Strength
Ability to withstand under prescribed conditions, a specified potential of a given characteristic between the terminals of each cup and the exposed conducting surfaces of the potentiometer, or between the terminals of each cup and the terminals of every other cup in the gang without exceeding a specified leakage current value.

Insulation Resistance
The resistance to a specified impressed DC voltage between the terminals of each cup and the exposed conducting surfaces of the potentiometer, or between the terminals of each cup and the terminals of every other cup in the gang, under prescribed conditions.

Power Rating
The maximum power that a potentiometer can dissipate under specified conditions while meeting specified performance requirements.

Power Derating
The modification of the nominal power rating for various considerations such as Load Resistance, Output Slopes, Ganging, nonstandard environmental conditions and other factors.

Life
The number of shaft revolutions or translations obtainable under specific operating conditions and within specified allowable degradations of specific characteristics.

Mechanical Characteristics

Shaft Runout
The eccentricity of the shaft diameter with respect to the rotational axis of the shaft, measured at a specified distance from the end of the shaft. The body of the potentiometer is held fixed and the shaft is rotated with a specified load applied radially to the shaft. The eccentricity is expressed in inches, TIR.

Lateral Runout
The perpendicularity of the mounting surface with respect to the rotational axis of the shaft, measured on the mounting surface at a specified distance from the outside edge of the mounting surface. The shaft is held fixed and the body of the potentiometer is rotated with specified loads applied radially and axially to the body of the pot. The Lateral Runout is expressed in inches.

Shaft Radial Play (single shaft potentiometer)
The total radial excursion of the shaft, measured at a specified distance from the front surface of the unit. A specified radial load is applied alternately in opposite directions at a specified point. Shaft Radial Play is expressed in inches.

Shaft End Play
The total axial excursion of the shaft, measured at the end of the shaft with a specified axial load supplied alternately in opposite directions. Shaft End Play is expressed in inches.

Starting Torque
The maximum moment in the clockwise and counterclockwise directions required to initiate shaft rotation anywhere in the Total Mechanical Travel.

Running Torque
The maximum moment in the clockwise and counterclockwise directions required to sustain uniform shaft rotation at a specified speed throughout the Total Mechanical Travel.

Moment of Inertia
The mass moment of inertia of the rotating elements of the potentiometer about their rotational axis.

Stop Strength

Static Stop Strength
The maximum static load that can be applied to the shaft at each mechanical stop for a specified period of time without permanent change of the stop positions greater than specified.

Dynamic Stop Strength
The inertia load, at a specified shaft velocity and a specified number of impacts, that can be applied to the shaft at each stop without a permanent change of the stop position greater than specified.
Orders

All orders are subject to acceptance by State Electronics, E. Hanover, NJ. No order or contract shall be deemed accepted unless and until such acceptance is made in writing by State Electronics.

All agreements are more contingent upon strikes, accidents or causes of delay beyond our control.

Prices and Specifications

Prices, quotations, specifications and other terms and all statements appearing in the Company’s catalogs and advertisements, and otherwise made by the Company, are subject to change without notice. State Electronics reserves the right to make changes in design at any time without incurring any obligation to provide same units previously purchased or to continue to supply discontinued items. The specifications shown in the sales literature are not always the latest version. Certified current specification prints are available upon request.

Unless specifically provided in writing, prices quoted are based upon manufacture of quantities and types originally specified and are subject to revision when interpretation or engineering changes are initiated by the customer. Quoted prices are based upon present cost of materials and labor and are subject to change without notice.

We are not responsible for typographical errors made in any of our publications or for stenographic or clerical errors made in preparations of quotations, all such errors are subject to correction.

Delivery

Delivery promise is based on our best estimate of the date material will be shipped from our factory and we assume no responsibility for losses, damage or consequential damages due to delays.

Terms of Payment

On approved orders, terms are net thirty (30) days from the date of invoice. The Company may at any time, when in its opinion the financial condition of the customer warrants it, either hold or suspend credit. In cases where credit is not established or satisfactory financial information is not available, the terms are cash with order or C.O.D. at the option of the Company. Each shipment will be considered a separate and independent transaction and payment should be made accordingly.

Shipments

All shipments are made F.O.B. shipping point (unless otherwise specified) and packaging for domestic shipment is included in the quoted price. When special domestic or export packaging is specified involving greater expense than is customary, a charge will be made to cover such extra expense. Unless otherwise specified, we will normally use the best, least expensive surface transportation. Reasonable care is exercised in packaging our products for shipment and no responsibility is assumed by the Company for delay, breakage or damage after having made delivery in good order to the carrier. All claims for breakage or damage should be made to the carrier, but we will be glad to render all possible assistance in securing satisfactory adjustment of such claims.

Claims and Rejected Material

Claims for defective material must be made within 30-days of the customer’s receipt of shipment. No products may be returned without a return authorization (RMA).

Country of Origin

The 388 / 389 and 70 series Mod-Pot products are assembled in the United States at our facility located in East Hanover, New Jersey, USA, using components parts manufactured by the Sensing and Control Division of Honeywell International headquartered in Morris Township, New Jersey, USA.

Export Information

HARMONIZED TARIFF SCHEDULE (HTS #) - 8533.31.0000

EXPORT CONTROL CLASSIFICATION # (ECCN #) - EAR99
DISCLAIMER

ALL PRODUCT, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

State Electronics Parts Corp., Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, “State Electronics”), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product. State Electronics makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product.

To the maximum extent permitted by applicable law, State Electronics disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on State Electronics’ knowledge of typical requirements that are often placed on State Electronics products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer’s responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer’s technical experts. Product specifications do not expand or otherwise modify State Electronics' terms and conditions of purchase, including but not limited to the warranty expressed therein.

Except as expressly indicated in writing, State Electronics products are not designed for use in medical, life-saving, or life-sustaining applications or for any other application in which the failure of the State Electronics product could result in personal injury or death. Customers using or selling State Electronics products not expressly indicated for use in such applications do so at their own risk. Please contact authorized State Electronics personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of State Electronics. Product names and markings noted herein may be trademarks of their respective owners.
